## **MECHANICS EXAMINATION**

CANDIDATE NAME			
Date		Candidate No.	
MATHEN Paper 4 M			9709/02
	answer on this questioned: List of formulae		1 Hour 15 Minutes

## READ THESE INSTRUCTIONS FIRST

- Answer **all** questions.
- Write your name, date & class on all the work you hand in.
- Write in dark blue or black pen.
- You may use an HB pencil for any diagrams or graphs.
- Do not use staples, paper clips, glue, or correction fluid.
- Write your answer to each question in the space provided.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- Where a numerical value for the acceleration due to gravity is needed, use 10 m s<sup>-2</sup>.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

## **INFORMATION**

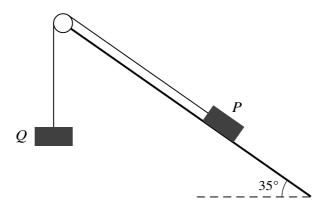

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].

Blocks P and Q, of mass  $m \log$  and  $S \log$  respectively, are attached to the ends of a light inextensible string. The string passes over a small smooth pulley which is fixed at the top of a rough plane inclined at  $35^{\circ}$  to the horizontal. Block P is at rest on the plane and block Q hangs vertically below the pulley (see diagram). The coefficient of friction between block P and the plane is 0.2. Find the set of values of *m* for which the two blocks remain at rest. [6]

A small bead Q can move freely along a smooth horizontal straight wire AB of length 3 m. Three horizontal forces of magnitudes F N, 10 N and 20 N act on the bead in the directions shown in the diagram. The magnitude of the resultant of the three forces is R N in the direction shown in the diagram.

Find the values of $F$ and $R$ .	[5

24 s after the cyclist leaves point A, a car starts from rest from point A, with constant acceleration  $4 \,\mathrm{m\,s^{-2}}$ , towards B. It is given that the car overtakes the cyclist while the cyclist is moving with constant speed.

i)	Find the time that it takes from when the cyclist starts until the car overtakes her.	[5]
